LILAC DESK

YOUR PLANNER HAS ARRIVED

Open it, tap around, *make it yours.*

Everything you need to get your custom planner into your app, find your way around it, and keep it working beautifully all year.

03 Before you start

04 GoodNotes

05 Notability

06 Samsung Notes

07 Getting around your planner

A NOTE FROM THE DESK

Your planner is ready. Here's how to start.

Thank you for letting me design something you'll open every day. Every page, link and detail in your planner was made around the way you told me you plan.

This guide walks you through the first few minutes: downloading your files, opening them in your app, and finding your way around. Turn to the page for your app, follow the steps once, and you're set.

If anything doesn't work the way it should, or you just want a hand getting set up, message me from your order page. That's what I'm here for.

IN THIS GUIDE

03 Before you start
04 GoodNotes
05 Notability
06 Samsung Notes
07 Getting around your planner
08 Stickers and extras
09 If something isn't working

Before you start

Three quick things first. They take two minutes and save you a headache later.

1 Download your files

Sign in at orders.lilacdesk.com and open **Files**. Download everything onto the device you'll plan on. Your files stay on your order page, so you can download them again any time.

2 Keep a clean copy

Save the original PDF somewhere safe, like iCloud Drive, Google Drive or your computer, before you write on it. Want to start fresh later? Import it again.

3 Open it in your app

Turn to the page for your app: GoodNotes on page 04, Notability on 05, Samsung Notes on 06. Using a different app? Any app that writes on PDFs and supports links will work.

4 Tap a link to test

Tap a month or a day and make sure it jumps. Links only respond when you're not writing, so each app page shows you how to tap them.

WHAT'S IN YOUR FILES

EVERY ORDER **Your planner**	A hyperlinked PDF, sized for your device. This is the file you open in your app.
IF INCLUDED **Stickers**	A GoodNotes sticker file, a folder of PNG images, or both, in the format you chose. See page 08.
IF INCLUDED **Matching extras**	Notebooks, journals, covers or extra layouts you added to your order, each as its own PDF.
COMMERCIAL, WITH SOURCE FILES **Source file**	The editable Keynote file, so you can make your own versions. See page 08.

YOUR APP

GoodNotes

IPAD | IPHONE | MAC | ANDROID | WINDOWS

The most popular home for digital planners. Your planner opens as a notebook with every link in place.

Open your planner

ON IPAD OR IPHONE

1. Tap Download on your planner in the portal.
2. Tap the share icon and choose GoodNotes. It may say *Open in GoodNotes* or *Copy to GoodNotes*.
3. Choose *Import as New Document*.

ANY DEVICE, FROM INSIDE THE APP

1. In GoodNotes, tap *+ New* and choose *Import*.
2. Find the PDF in Files or Downloads and tap it.

ON A MAC

- Drag the PDF into your GoodNotes library, or use File, then Import.

Tapping links

- Turn on *Read-only mode* (the pen with a line through it, in the toolbar) and tap any link. Turn it off again to write.
- Or touch and hold a link, then choose *Open Link*.

Using your stickers

- **GoodNotes sticker file:** import it like your planner. Use the lasso to circle a sticker, copy, then paste it onto any page.
- **PNG stickers:** add them with the image tool, or save them into the *Elements* tool as your own collection so they're one tap away.

Handy habits

- Duplicate the notebook before you start writing, from its menu in your library. That's your clean copy.
- Use the page thumbnails to see your whole planner at a glance.
- Need more notes pages? Duplicate a notes page from the thumbnails. New pages won't have links, but the original pages keep theirs.

Links still not working?

Check that you're not in a writing tool, then try again in Read-only mode. If it still won't jump, message me and tell me which page.

YOUR APP

Notability

IPAD | IPHONE | MAC | ANDROID

Your planner opens as a note with every page and link in place, ready for your pen.

Open your planner

FROM THE PORTAL

1. Tap Download on your planner.
2. Tap the share icon and choose Notability.
3. Pick a subject to keep it in, and it opens as a new note.

FROM INSIDE THE APP

1. In your Notability library, tap *Import* (or +, then Import).
2. Find the PDF in Files or Downloads and tap it.

Tapping links

- Put the pen down: switch to the lasso or select tool, then tap the link.
- Or tap with your finger. If a finger tap leaves a mark, turn on Notability's setting that lets only your stylus write, then tap again.

Using your stickers

- **PNG stickers:** tap the + (media) button, choose a photo or file, then pick your sticker. Drag the corners to resize and move it anywhere on the page.
- Save your favorites to your Photos so they're quick to find.

Handy habits

- Duplicate the note before you start writing, from its menu in your library. That's your clean copy.
- Use the page overview to see every page at once and jump around quickly.
- Keep your planner in its own subject so it's always at the top of your library.

Links still not working?

Make sure Notability is up to date, then try tapping with the lasso tool selected. If a link still won't jump, message me and tell me which page.

YOUR APP

Samsung Notes

GALAXY TAB | GALAXY PHONE | GALAXY BOOK

Built into Galaxy devices and made for the S Pen. Your planner opens as a note you can write on right away.

Open your planner

FROM YOUR DOWNLOADS

1. Tap Download on your planner in the portal.
2. Open *My Files* and go to *Downloads*.
3. Tap the PDF and choose Samsung Notes.

FROM INSIDE THE APP

1. In Samsung Notes, use the option to import a PDF (look for the PDF icon at the top of your notes list, or in the menu).
2. Pick your planner from Downloads.

Tapping links

- Switch to *Read mode* (the book icon at the top of the note), then tap a link.
- Switch back to editing when you're ready to write.

Using your stickers

- **PNG stickers:** save them to your Gallery. On a page, use the insert option to add an image, then pick your sticker. Resize and move it like any picture.

Handy habits

- Keep the downloaded PDF in My Files (or Google Drive) as your clean copy.
- Use the page view to see your pages at a glance and jump around.
- Turn on Samsung Cloud sync in the app's settings so your planner is backed up.

Links still not working?

Update Samsung Notes from the Galaxy Store, since links in PDFs need a recent version, then try again in Read mode. Still stuck? Message me.

Getting around your planner

Every page is linked. Once you know where the links live, you'll never scroll through pages again.

TABLESS

The links are built into the page. Tap the month name to open that month, a date to open that day, and the small links at the top to get back to your calendar or index.

WITH TABS

Tap a tab along the edge to jump to that month or section. The dates on your calendar pages link to their own pages too.

a Start at the index

Your index or year page links to every section. It's the best place to start when you're not sure where something is.

b Year to month to week to day

Each view links down to the next and back up again, so you can move from the big picture to today in a couple of taps.

Stickers and extras

The finishing touches, and what to do with the files that came alongside your planner.

GoodNotes stickers

A sticker file that opens in GoodNotes like a notebook. Circle a sticker with the lasso, copy it, and paste it onto any page. It keeps its size and colors.

PNG stickers

Transparent images that work in any app. Save them to your Photos, Gallery or Files, then add them with your app's image tool. Your app pages show exactly where.

Matching notebooks and journals

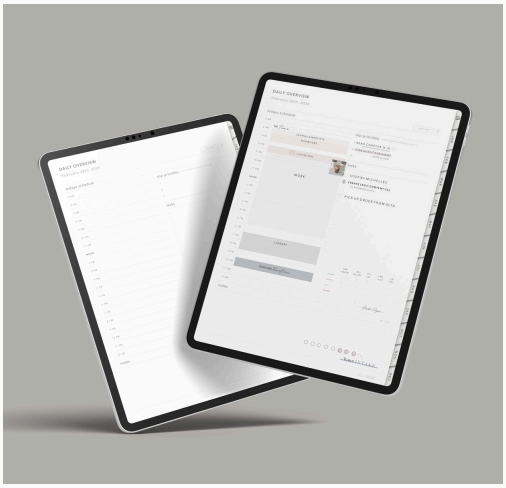

Open these the same way as your planner. They're separate files, so you can keep them as their own notebooks.

Your source file Commercial

The .key file opens in Keynote on a Mac or iPad. When you've made your changes, export it as a PDF (File, then Export To, then PDF) to keep every link working. Your license lets you sell or share the planners you make. The source file itself is just for you.

Printing pages

You can print any page at home from your app or a PDF reader. Links won't work on paper, of course.

PLANNED IN · *a daily page, decorated*

Where to keep stickers

Make one album or folder just for your stickers. When you go to add one, it's right there instead of buried in your camera roll.

If something isn't working

A link won't jump.

You're probably in a writing tool. Switch to Read-only mode in GoodNotes, the lasso in Notability, or Read mode in Samsung Notes, then tap again.

A link goes to the wrong page.

That's on me. Message me with the page and the link, and I'll fix it free within your 14-day fix window.

My new pages don't have links.

Pages you add or duplicate yourself are copies without links. The original pages keep all of theirs.

The pages look small or cut off.

Check you downloaded the version for your device, then try your app's fit-to-width or zoom setting.

I wrote on it and want to start over.

Import your clean copy again, or download the planner again from your order page.

I got a new device.

Sign in at orders.lilacdesk.com on the new device and download your files again. They stay on your order page.

Can I use it in a different app?

Yes. Any app that writes on PDFs and supports links will work. Import it the same way as any PDF.

Can I share it with a friend?

Personal planners are licensed to you. If a friend would love one, send them to lilacdesk.com and I'll make them their own.

App menus change

Apps update their buttons and menus from time to time, so yours might look a little different from these steps. If you can't find something, message me and I'll walk you through it.

I'M HERE IF YOU NEED ME

Happy *planning.*

1. Message me from your order page
2. Mistakes on my end are fixed free for 14 days
3. Loving it? Leave a review from your order page

orders.lilacdesk.com

Or email support@lilacdesk.com with your order number.
